

System MacroView ClauseBank

Release 8.2

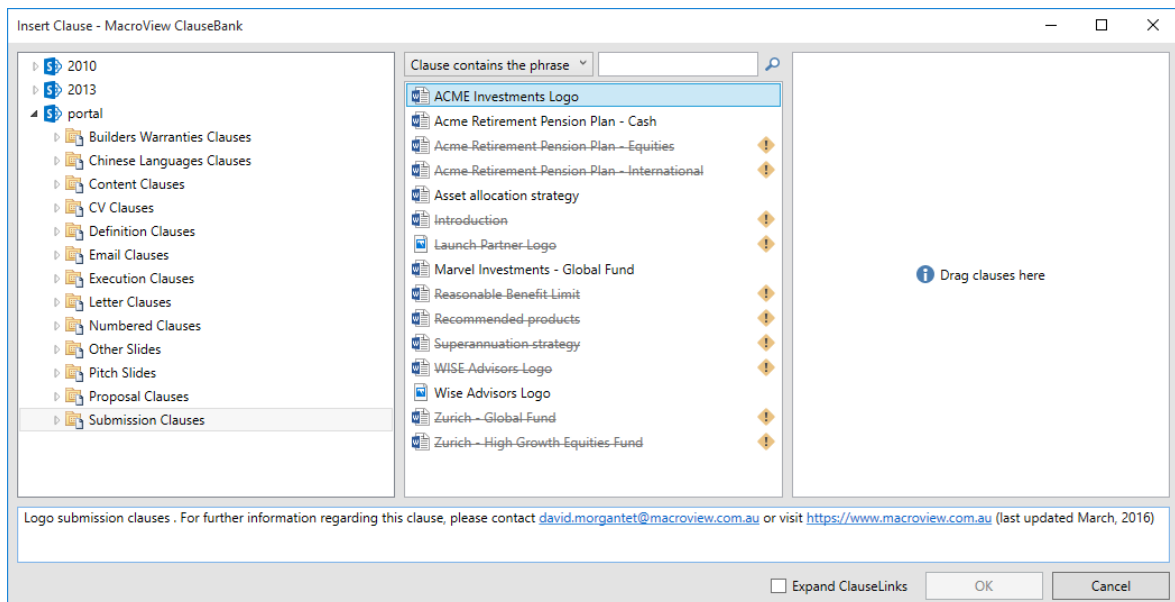

Date March 2016

ClauseBank Client

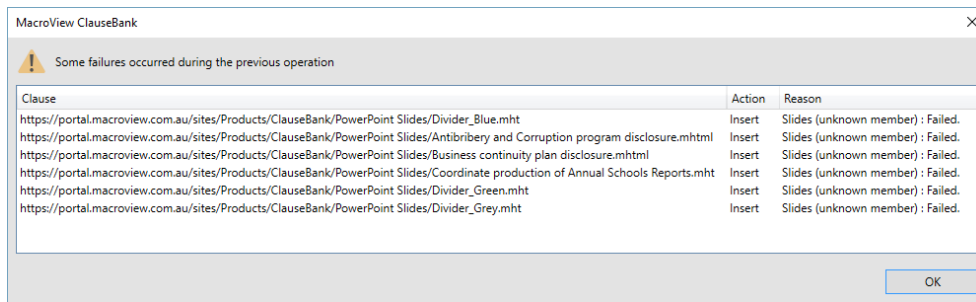

- Icons display the type of document in the selected list.

- URLs are recognised in the description property. (URL's that contain http or https and email address are selectable)

- Failed inserts/expansions after Insert Clause or Expand ClauseLinks completes are now displayed in a single summary dialog rather than displaying a message box per failure. Failure messages can also be copied to the clipboard.

- To better support customisations, ClauseBank now supports a number of additional events when adding and expanding clauses as well as the ability to turn off the standard user interface elements with code.
- The "New Clause" people picker now works for Office 2016

Clause Libraries

- Clause content types have been updated to use docx and pptx format document templates.
- The Create Folder option is now enabled in the Clause Library list definition.
- Category and Update Frequency fields in Clause content types are now optional.
- The Clause Library list definition has been updated to the SharePoint 2013 schema. This enables Quick Edit mode in compatible views. **(Note that a compatible view is one that is not a Group By view. This is a SharePoint limitation)**

Global POC Clauses

Stop editing this list

All Clauses Expired / Expiring Clauses Maintenance ...

✓	📄	Name	Category	Content Expert	Update Frequency
	📄	a) Executive summary	...	4) Pitch Template - Best Practice Structure	Quarterly
	📄	Actual	...	1) Small Clause	Not Applicable
	📄	b) Understanding your issues	...	4) Pitch Template - Best Practice Structure	Quarterly

Other

- Resolved an issue with ClauseLinks attempting to expand after the same link has already failed to expand on an earlier attempt.
- Inserting an image now works when the active presentation does not have any slides.
- Resolved a compatibility issue with MacroView Precedent.
